

Annotating price charts and how to easily record copious notes using BullCharts software

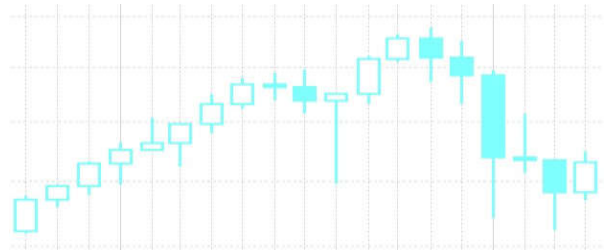

Share Market
Toolbox

Robert Brain

October 2020

*Price charts summarise the underlying
opinions and emotions of the market participants.
Every chart tells a story.
It pays to understand the stories in the price charts.*

Revision: 2

Introduction

When looking for stocks to buy:
study the price chart and
record the analysis and observations,
and then revisit the notes at a later time.

- What sort of observations are we talking about?
- What are the options for recording them?

When I study the charts...

I look at price action from a few different “angles”:

- Daily chart looking for ***trend lines***, ***support*** or ***resistance*** levels and ***chart patterns***
- “Weinstein” weekly chart with 30 week MA
- ***Momentum*** indicator (weekly)
- ***Twiggs Money Flow***
- ***GMMA*** (daily on weekly candles)
- ***Candle patterns***
- ***Volume***.

Imagine the complex chart details

If all of these details went onto one price chart, imagine how complicated it might look.

- Trend lines, support, resistance and chart patterns (daily chart)
- “Weinstein” weekly chart with MA
- Momentum indicator (weekly)
- Twiggs Money Flow
- GMMA (daily on weekly candles)
- Candle patterns
- Volume.

In this session...

- Consider the **multitude** of different *technical analysis studies* in BullCharts;
- Consider the different options for **recording** the details.

Interactive...

- Please ask questions.
- Let's discuss details.
- Any price charts prepared with BullCharts software.
